MIKO LX D

37-keys

It is well known that computer music drives modern music production. Nearly every kind of instrument and piece of audio gear has been recreated as a computer application or virtual instrument that rivals the performance of the real-world instrument. Without the limitations of the hardware world, virtual instruments have boundless creative opportunities for musicians.

However, getting a computer, multiple applications, and controllers to work together and create music is difficult at best — until now.

Designed on PC-architecture, our instruments allow users to expand their performance standards well into the future. Need more memory or a larger hard drive for storing all of your music files? No problem, just upgrade or swap out existing hardware in minutes. Want to add Pro Tools LE to your rig? Not a

problem; Firewire, USB, PCI and PCI EXPRESS are all supported by Open Labs technology.

The Gen5 MiKo™ LX D is the latest addition to the Open Labs® products line. Equipped with a 15" touch-screen, 37-keys, external QWERTY keyboard and running Windows® OS, MiKo LX D is an entirely new class of portable music instrument. This portable media work center was specifically designed for the electronic musician, music producer, and today's digital lifestyle.

MiKo LX D's optimized Windows OS natively supports virtually any music application or plug-in developed for a PC. From Pro Tools™ to Nuendo™, Native Instruments™ Komplete™ to Spectrasonics™ Omnisphere™, MiKo LX D does it all with ease.

MiKo LX D is equipped with the new Bump MP™ integrated drum module, designed to allow the user to create beats and trigger any sound, loop, or sample. Enhanced with a special Open Labs version of Guru™ from FXpansion™, Bump MP is a sophisticated drum machine as well. Key features of the Bump MP include: (16 plus 1) fully assignable pads, note repeat, max level, fixed level fader, transport controls, chromatic mode, hold, pad tune, multiple groove preset, and eight engines with 24 presets per engine.

MiKo LX D is also equipped with the new Open Labs Mix/Edit controller. The mixer section consists of multiple fully assignable controls including: (8) encoders, (8) lighted buttons, (8) faders, (4 X 4) banks (total of 128 channels) and (1) master volume fader. The edit section consists of multiple, fully

assignable controls including: (8) encoders, (1) LCD display (for encoders), (4) buttons, and (4) banks (total of 32 control parameters).

MiKo LX D has the most relevant and compelling sounds including: Open Labs *Master's Series*™ The Master's Series Library™ produced by multi-platinum producer Mr. Porter (Denaun Porter), as well as Open Labs' own V5™ sound, sample and loop library.

Open Labs Riff™ is an entirely new concept in virtual instrument hosting.

Written from the ground up by Open Labs, Riff™ encompasses over six years of live performance and studio production knowledge gathered from some of the world's top artists, engineers, composers, and producers. Its advanced features

include: Live Controls™, which allows the user to create any number of virtual controls in real-time that can be mapped to various effects and other parameters. Advanced intelligence allows any number of virtual controllers to manipulate any number of other virtual controllers, providing automation for virtual instruments and effects. Rewire allows for this powerful host application to be used within any DAW program.

The MiKo offers superior mobility in a compact package. It's perfect for working in a project studio of performing live – where creating beats, guitar and vocal multi-tracking, and DJ/VJ capabilities are as necessary as playing a keyboard.

The MiKo's assignable controllers elevate live performance beyond normal application. For instance, you can trigger MP3's in real time, then grab audio waveforms via the touchscreen, top things off with real-time drum, bass, and vocal lines.

Need some help? Open Labs instruments are equipped with an Ethernet port, allowing access to the Internet via a broadband connection. Open Labs tech support can log-in to your system, and our online technicians can remotely view and diagnose any issue – while you are still in your own studio.

We've included over 200 world-class virtual instruments and effects with over 20,000 presets and virtually unlimited capability for third party plug-ins and applications. For a complete list of software, sound libraries, and specifics of each model, please visit our website at www.openlabs.com.

MiKo LX D: Dimensions 34"(L) X 19"(W) X 7"(H); Weight (base configuration) 38.8 lbs.
